# ECA Scheme

## RDM & The Energy Technology List's ECA Scheme

Stay safety compliant, protect assets, manage energy and reduce the associated costs by selecting HVACR control hardware featured on the Energy Technology List.

### What are the ETL and ECA?

The ETL is one of the world's largest databases of top performing energy-saving products. Part of the Enhanced Capital Allowance (ECA) scheme, businesses who purchase qualifying ETL products can claim a tax break of 100% in the first year, representing a 19% cost saving.

Write-off the purchase cost against your taxable profits, saving approximately 19%.

Demonstrate environmental awareness and conscious efforts to reduce carbon footprint.

Protect assets and brand, by complying with safety regulations and legislation.

### How much could you save?

#### Example One - Without ETL

You invest £10,000 on a new HVACR equipment and claim standard capital allowance at the rate of 18%. Your corporation tax rate is 19%

Cost savings: Tax relief would be £342 in the first year\* with the option to claim further tax relief in future years.

\*on the basis that all other Annual Investment Allowances (AIA) have been utilised and the standard capital allowance is being claimed.

#### Example Two - With ETL

You invest £10,000 on a new HVACR equipment, but select equipment that qualifies for the ETL and can, therefore, claim an Enhanced Capital Allowance (ECA).

Cost savings: ECA provides an immediate 100% tax relief of £1900 in the same year. Representing a cash flow boost of £1558 that would be applicable for every £10,000 that is spent in the same year. It also removes the need and cost of claiming the Writing Down Allowance (WDA) in future years.

\*As a company you can claim ECA's in addition to AIAs. If you have used up your AIA allowance, then you could claim an ECA on the ETL listed products. Increasing total available accelerated tax allowances.

## Qualifying RDM Products

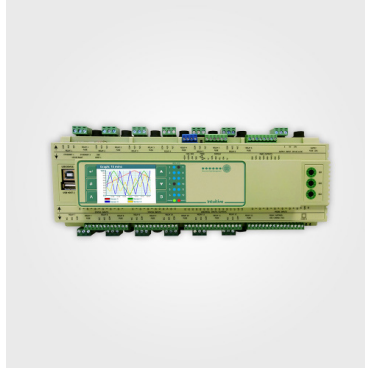

A number of RDM products have been tested and approved to appear on the Energy Technology List (ETL), and therefore qualify for the Enhanced Capital Allowance (ECA) scheme.

### DMTouch

PR0510

Market-leading control system front-end, with the ability to communicate across proprietary protocols.

### Intuitive Controllers

PR0650 - PACK, STCO2 and TDB model variants

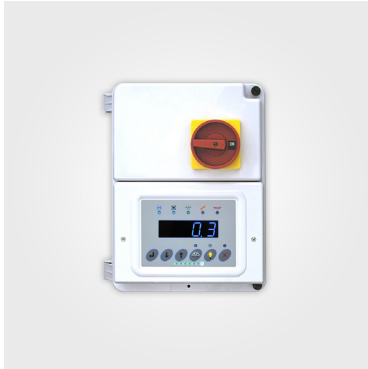

Designed for every control scenario, with PLC, Plant, Pack, Stepper and CO2 model variants.

### Mercury Controllers

PR0740 - TWI, TWO, MOB and CAS model variants

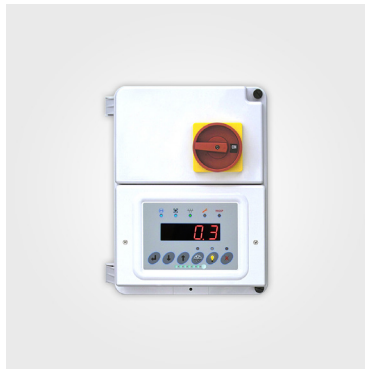

Advanced, electronic, temperature, and refrigeration controls with optional IP built-in.

### Coldroom

PR0150

Designed to operate low and high-temperature cold rooms, with EEV and LLV build options.

### SmaRt Coldroom

PR0946

Low cost, it is perfect for installations where communication options are a low priority.

### ML Controller

PR0120

Case controllers and thermostats, with broad range of build and communication options.

Not all products, model variants and build options are listed, please contact your account manager or a sales representative for more information.
